BLACK BOX®

OnGo Demo Program

OnGo delivers a high-performance private LTE network for clinics, medical centers, and hospitals.

OnGo
Powered by the CBRS Alliance

For hospitals and clinics striving to meet the growing demand for personalized healthcare, wireless networks have become the foundation for delivering best-in-class patient services. OnGo makes the difference. OnGo delivers a secure, high-performance LTE network — one that physicians, nurses, administrators, patients and their families can rely on to provide services and stay connected.

This exciting program brings OnGo technology to you, allowing you to establish your own private LTE network, and effectively give you a test drive of the latest wireless technology advances in the Healthcare space.

Participating in our OnGo Demo program will provide a hands-on solution experience demonstration to the value of quality connectivity.

Outdoor Connectivity
Provides you an opportunity to experience private wireless outdoor connectivity.

USE CASE	OUTCOME/BENEFITS
Smooth Transition between buildings. Experience work continuation when leaving one building, walking outside, or en route to another building without dropping signal. Enable nurses to test and triage patients outside the hospital. Onboard new patients efficiently. Ability to work on Tablet without interruption no matter if indoor or outdoor.	· Deliver seamless user experience and network security. · Faster, reliable, and secure connection coverage by eliminating connectivity dead spots. · Performance reliability with greater user capacity · Experience little to no interference by removing indoor/outdoor connectivity challenges.

Increase Efficiency
Provides you an opportunity to experience OnGo network to quickly transmit large imaging files.

USE CASE	OUTCOME/BENEFITS
Transmit files of any size to any department at any time securely and without regard for congested network speeds. Experience sending MRIs and other large images to specialists or patients for review without the long delay. No concerns about sending patient data through public Wi-Fi networks.	· Provides the reliability and flexibility your business needs. · Improve both access to care and the quality of care. · Transmit files of any size safely and without concerns about server space. · Enhanced security when sharing documentation and collaborating.

Critical Communication
Provides you an opportunity to experience OnGo dedicated networks.

USE CASE	OUTCOME/BENEFITS
Prioritize traffic: separate public and critical communications by running separate dedicated networks. Host back office operations on a private, secure OnGo network, while front-of-the-house, public communications (visitors/patients) remain on public networks like Wi-Fi. Remove excessive strain on systems while limiting user access to network with separate networks.	· Optimize use of hospital's network. · Assign different groups to the network slice that is best suited to support each groups needs. · Prioritize specific traffic on the network. · Ensure optimum performance and quality of service. · Decide which network each device can attach to providing greater control over network access. · Remove configuration or reconfiguration when the network changes – reducing staff frustration and connectivity issues.

Voice over OnGo
Provides you an opportunity to experience 'Over the Top' voice apps on a high Qos network.

USE CASE	OUTCOME/BENEFITS
Voice app 'Over The Top' OnGo. Move your most demanding apps (voice) away from your Wi-Fi network allowing apps like PatientKeeper to benefit from dedicated bandwidth.. Enable Wi-Fi to be more flexible for general apps, while using a secure OnGo network for Clinical apps. Ex: Voalte, PatientKeeper, EPIC, PatientSafe, Spok.	· High voice quality without audible artifacts. · Minimize hand-offs & range limitations. · Advanced security through private network. · Minimizes competition for Wi-Fi throughput.

Mobile Connectivity
Provides you an opportunity to experience OnGo LTE native voice (no App required)

USE CASE	OUTCOME/BENEFITS
Complete Voice experience. Integrate Enterprise IP-PBX VoIP onto Private OnGo network. Move your toughest apps (voice) from Wi-Fi and place on OnGo. Securely use enterprise voice on premises then transition to MNO when off-site without changing devices/SIMs.	· Experience a network for the future. · Advanced security through private network. · High voice quality without audible artifacts. · Minimize hand-offs & range limitations. · Easy internal calling with ability to roam freely.

EHR over OnGo
Provides you an opportunity to experience EHR with speed and consistency over OnGo

USE CASE	OUTCOME/BENEFITS
EHR over OnGo. Make your EHR data instantly and securely accessible to authorized users. Remove EHR application from your Wi-Fi and place on OnGo – eliminating capacity concerns.	· Improve hospital workflows. · Carry data reliably and securely from (mobile?) devices to doctors or databases containing critical patient information. · Connect with speed and consistency to a network that is devoted to improving operational efficiency and enhancing patient care. · Eliminate Wi-Fi performance issues.
