

Multi-OS Extended Desktop KM Switch

With the Freedom™ II 4-Port and 8-Port Switches, you can control operations across four or eight computers by simply moving your mouse from screen to screen. This saves desktop space and improves operator response time in mission-critical environments. Freedom Switches also allow users to simultaneously access a mix of USB peripherals, including high-speed USB 2.0 devices.

Freedom is ideal for command and control applications, such as finance, trading room floors, airports and emergency call centers.

Benefits and Features

Extended Desktop, Streamlined Desktop

Easily access information and control operations across four or eight computers with just one keyboard and mouse.

Glide-and-Switch Technology

Enables you to quickly switch CPUs by moving the mouse from monitor to monitor.

Faster Response Time

Increase operator response time in command and control centers

Share Peripherals

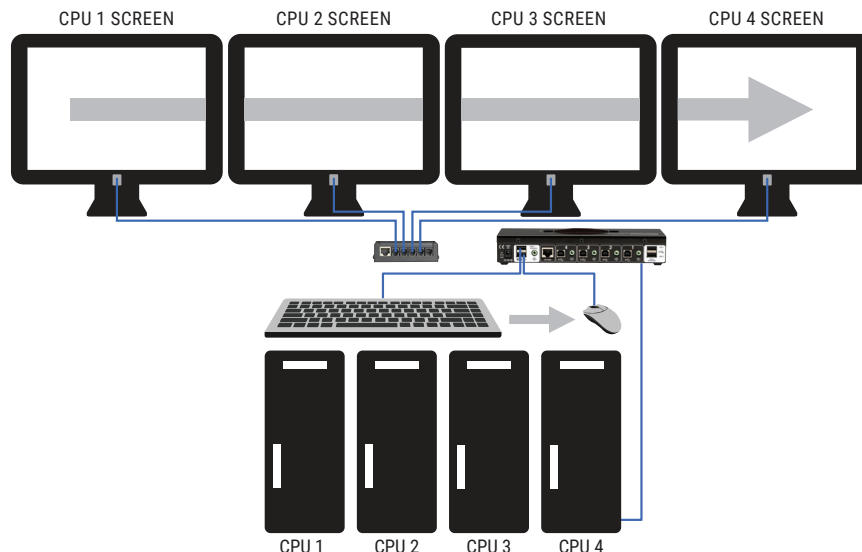

Two additional independent USB ports enable you to connect two USB peripherals and switch between them

Simplified Setup

No software is needed, so setup is quick and easy.

Switch Ports by Simply Moving the Mouse

KV0004A-R2
